RESEARCH REFERENCE AND CITATION GUIDE

# Texas Oil County Income Statistics

Texas oil county income statistics: complete income, population, state ranks and weighted comparisons for a fixed ten county cohort from 2010 through 2024.

Analysis edition November 14, 2026 · American Mineral Registry

A concise reference to the full source-backed study, with eight exact finding links. Source observation periods remain distinct from the article date.

## Specific findings with their source boundaries

Eight of the ten counties in AMR's fixed January 2024 preliminary oil production cohort had higher reported per capita personal income than Texas in 2024. Texas reported $69,823. The comparison uses all 254 Texas counties for ranks and an unchanged ten county cohort. Exact finding 1.

The fixed ten county Texas oil production cohort had $33,709,927,000 in personal income and 273,083 residents in 2024. Summed income divided by summed population gives $123,442.0561 per resident, compared with Texas's reported $69,823 PCPI. Exact finding 2.

In 2024, the unweighted median of the ten selected Texas counties' reported PCPIs was $90,529 and their unweighted mean was $108,795.20. Their combined personal income per resident was $123,442.0561. The county statistics weight places equally; the combined quotient uses the summed resident population. Exact finding 3.

Loving County's 2024 personal income of $10,590,000 divided by 48 residents gives $220,625 per resident. Loving ranked first among all 254 Texas counties on reported PCPI in the pinned BEA CAINC1 file. Exact finding 4.

Midland County accounted for 67.23% of the fixed ten county cohort's population and 79.74% of its personal income in 2024. Midland had 183,587 of 273,083 residents and $26.879622 billion of $33.709927 billion in personal income. Exact finding 5.

The fixed ten county cohort represented 0.8727% of Texas population and 1.5429% of Texas personal income in 2024. The underlying totals were 273,083 of 31,290,831 residents and $33.709927 billion of $2,184.833273 billion in personal income. Exact finding 6.

From 2010 through 2024, the fixed ten county cohort's personal income increased 156.4% and its resident population increased 19.8%. Combined personal income per resident increased 114.1%, from approximately $57,663 to $123,442. These are nominal changes. Exact finding 7.

Reeves County moved from Texas PCPI rank 248 in 2010 to rank 26 in 2024. Over the same period, its nominal personal income increased 221.3%, population decreased 13.4%, and calculated income per resident increased 270.8%. Exact finding 8.

## Method, definitions and complete data

BEA resident personal income per person, current dollars; not median household income, mineral royalties or a causal oil production effect.

The full HTML article includes source definitions, supporting tables, the complete fixed comparison and a specific permanent link for each finding. Figures are also readable as HTML text. This PDF is a concise reference to the complete article, not a replacement for its detailed methodology.

Use the reproduction ZIP for the pinned source input, complete CSV files, data dictionary and standard-library calculation program. Values are rounded only after calculation. Original producer estimates, material forms and source windows remain attached.
